# Overview

In our project we are trying to predict FSA scores based on historical data of students in elementary school. The Florida Standards Assessments (FSA) are exams that measure whether a students in the State of Florida are making progress in terms of curriculum standards set by the state. These assessments examine students higher order thinking skills.

# Data

Our data is composed of 300 or more students in two different schools in the State of Florida. The data collected was I-Ready diagnostic tests for grades K-2 and FSA scores for grades 3-5. There is at least three data points per student in one given school year.
